Peets Funds Management Pty Ltd Level 3, 492 St Kilda Road MELBOURNE VIC 3004

Dear Sirs.

RE: LEVEL 1 EARTHWORKS INSPECTION AND TESTING HAVEN ESTATE – STAGE 3, TARNIET

Please find attached our Report Nos 16087/R001 to 16087/R006 that relate to the field density testing that was conducted across the filled allotments at the above subdivision. The level 1 inspections and associated field density testing commenced in mid February 2016 and was completed in late February 2016.

The inspections and testing of the earthworks was undertaken in general accordance with the Level 1 requirements of AS 3798 - Guidelines on Earthworks for Commercial and Residential Developments.

The site inspection and testing was performed by experienced geotechnicians from this office. Any areas that were deemed unsatisfactory were reworked and retested under their supervision. The testing was performed to the relevant Australian Standards and the accompanying test reports carry NATA endorsement. The attached compaction results, which were located randomly throughout the fill profile, are considered to be representative of the bulk fill materials that were placed across the reported allotments by Winslow Constructors during the aforementioned period. The approximate locations of the field density tests can be seen on the attached plan (Figure 1).

We are of the view that the bulk fill materials that have been placed across the reported allotments by Winslow Constructors during the aforementioned period can be considered as having been placed in a controlled manner to a minimum density ratio of 95% (standard compactive effort).

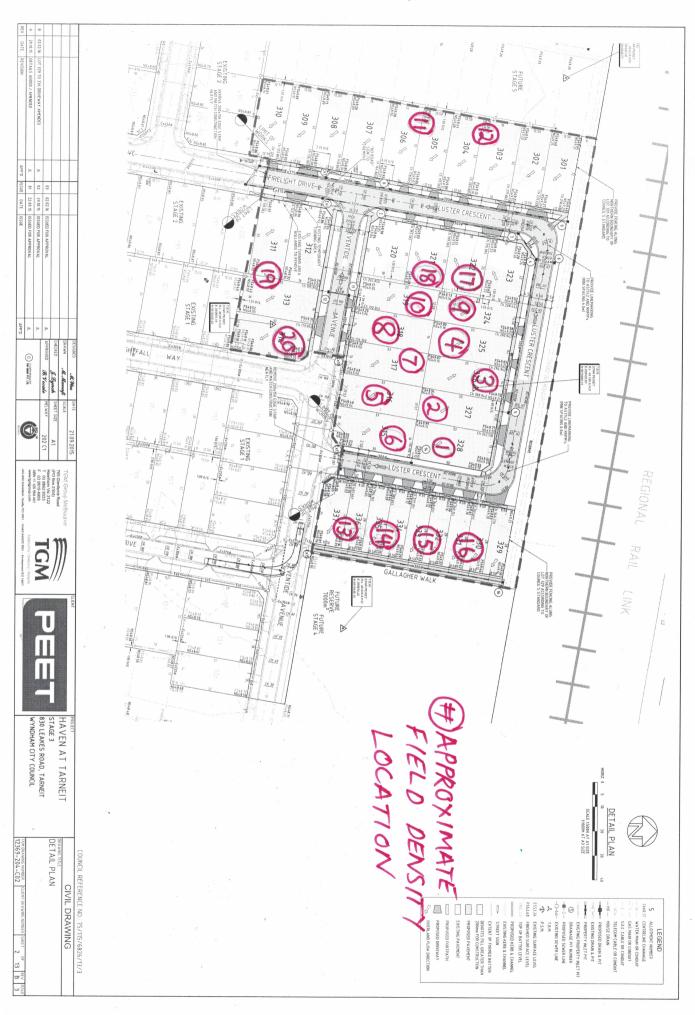

Please contact the undersigned if you require any additional information.

Civil Geotechnical Services

Griffin Brown
